### ***Magnet Spring Assisted Tuned Dynamic Absorber for Low-SWAP Stirling Cryocooler***

***A. Veprik, V. Babitsky, R. Refaeli, S. Kurucz, L. Bunin,  
CryoTech BV, Israel***

The vibration export resulting from the motion of piston and displacer assemblies within Stirling linear cryocoolers can pose significant challenges, especially in the context of long-range, high-resolution, and low Size, Weight, and Power handheld and gyro-stabilized cooled high operating temperature infrared imagers.

CryoTech has introduced an innovative and cost-effective micro-miniature split Stirling cryocooler comprised of a single-piston compressor and a pneumatic expander, where the vibration concerns were effectively addressed by minimizing the weight of the moving assemblies and using an optional Tuned Dynamic Counterbalancer featuring magnetic spring.
